# "Kanpur Metro Android App"

Under the supervision of **Mr. Sandeep Kumar Yadav.**

INTRODUCTIO:-Purpose behind developing this application in android is that any person who has android OS enabled mobile device can easily see the nearest Metro Station from his/her current location. Users just need this android application installed on their phone. This application will also show the current location. When you click on the application it will open the Google map with showing your current location and view the nearest metro station from your current location. When you click on station info button then it show all information about the current metro station (Help desk, Inquiry, Canteen, Nearest Places, Market, etc.). When the user click on route between station buttons than it shows all station list between sources to destination, it also show shortest route between source to destination, and provide all information about travel. It is just a complete tourist guide.

Kanpur Metro Android app Team

Consolation: - The Kanpur Metro application is an important tool for a traveller. Most of the traditional methods are time consuming and required skilled human resources who supposed to guide the tourist in field. The main purpose of the proposed project is to ensuring to save the time of tourist, provide proper guidance and directions to the tourist.
